

# Exhibition Highlights

- Exhibition Name : 2020 World Smart Energy Week- 4th Tokyo Thermal Power Expo
- Exhibition Date : 2020/02/26~2020/02/28
- Exhibition Location : Tokyo Big Sight
- Exhibition Highlights :

## About World Smart Energy Week

All kinds of technologies/products related to "hydrogen & fuel cell", "solar cell/module", "PV systems", "rechargeable battery", "smart grid", "wind energy", "biomass power" and "thermal power" are gathering. Each field is divided into 7 specialized shows, and active business meetings will be conducted between exhibitors and visitors from around the world. In addition, technical conferences take place by industry's top leaders every day. This exhibition is held twice a year in Tokyo (Mar.) and Osaka (Sep.). At this time, FHI participated in World Smart Energy Week 2020 exhibition at Tokyo.

The main topic of FHI's demonstration was "Environmental-Friendly Power Generation" and "Clean Coal Generation Technology". We not only aim at providing the existing service for "Clean Coal Generation Technology" but also engage in the activities of the new power business such as Renewable Energy, Green Energy, Supercritical Coal-Fired Power Plant and Combined Cycle Gas Power. Moreover, we also introduced our EPC reference list in Taiwan, China, Indonesia and the Philippines.
